## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 22 November 2006 has been entered.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 16-21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. It is unclear if "the hub assembly" refers to the hub sub-assembly or something else.

### ***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-3, 5-15, 22-28 and 30-35 are rejected under 35 U.S.C. 102(b) as being anticipated by Szent-Gyorgyi et al. (US 2,834,541). Szent-Gyorgyi ('541) discloses an

agitating retort comprising a shell structure (11, 14, 19, 20); a drum assembly (22) rotatable within the shell structure, said drum assembly adapted to receive containers; a process fluid distribution system (37, 38, 45) positioned within the interior of the drum assembly to distribute fluid within the drum assembly; a rotary coupling (53, 41) disposed within the shell structure and exterior to the interior of the drum assembly, the rotary coupling further in fluid flow communication with the distribution system to direct processing fluid from the exterior of the drum assembly to the distribution system within the drum assembly during rotation of the drum assembly within the shell. The drum assembly includes a hub sub-assembly coupled to one end portion of the drum assembly, said rotary coupling integrated in the hub sub assembly (see Fig. 1). The rotary coupling comprises portions defining a fluid receiving annulus (within 41). The hub assembly has a distribution manifold in fluid flow communication with the fluid receiving annulus, said distribution manifold comprising a plurality of fluid passageways (37) extending from the fluid receiving annulus. A flow controller (54) is disclosed.

#### ***Allowable Subject Matter***

6. Claims 16-21 would be allowable if rewritten to overcome the rejection under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

#### ***Response to Arguments***

7. Applicant's arguments have been considered but are moot in view of the new grounds of rejection.
